

LUCKBOUND

Master Game Design & Development Specification

Version 0.1 — Prototype / Canonical Scaffold

Roll your fate. Enter the unknown. Become legendary.

Source-of-truth scaffold for human collaborators and AI-assisted Roblox development.

Document Purpose

This document consolidates the LUCKBOUND concept into a concrete scaffold for a small team and AI-assisted Roblox development. The defining hook is **players roll for worlds**, enter temporary expeditions, actively fight and explore, obtain rare discoveries and powers, return to the hub, and roll again.

The prototype objective is to prove: **Spawn → understand Fate → roll a world → enter → fight → discover → survive → return → roll again**. This is a canonicalized scaffold based on the supplied design discussion.

1. Game Identity

Title: LUCKBOUND

Tagline: Roll your fate. Enter the unknown. Become legendary.

Core fantasy: become increasingly capable of bending reality through Fate, accessing rarer destinations, stronger builds, stranger discoveries, and eventually global events.

Genre: RNG / adventure / light action RPG / collection / idle-retention.

Design rule: RNG determines possibility. Gameplay determines mastery.

2. Core Gameplay Loop

ROLL A WORLD → ENTER RANDOM DESTINATION → FIGHT & EXPLORE → DISCOVER RARE THINGS → ACQUIRE POWERS → DEFEAT BOSS → INCREASE FATE → RETURN TO HUB → ROLL AGAIN.

Three RNG layers: World — where am I? Build — what powers do I have? Discovery — what can I find?

Combat prevents RNG → RNG → RNG from becoming the entire experience. Idle progression is a retention layer, not the primary game.

3. The Crossroads — Permanent Hub

Center: Fate Engine — massive floating machine/portal used to roll destinations.

North: Hall of Legends — extraordinary firsts and records.

East: Discovery Archive — collection interface.

South: Expedition Gate — transition into rolled worlds.

West: Training Grounds — basic combat onboarding.

Upper platform: Global Observatory — visualizes global Fatebreaks.

Visual direction: stylized fantasy + cosmic mystery; deep blue/purple sky, warm gold lighting, floating islands, runes, crystals, particles, and a monumental Fate Engine. Keep geometry readable across phone, tablet, console, and PC.

4. Fate Engine & World RNG

The original hook is preserved: **you don't simply unlock worlds; you roll for worlds**. A roll grants an expedition rather than permanently locking ownership.

Prototype worlds: Verdant Valley (Common), Emberfall (Rare), Astral Reach (Mythic).

Illustrative world probabilities: Verdant Valley 50%, Ancient Ruins 25%, Sunken Kingdom 12%, Inferno 7%, Sky Citadel 4%, Astral Realm 1.5%, Void 0.45%, The Unknown 0.05%. These are design examples for later balancing.

Fate gradually gives the player agency through rerolls, destination choice, modifier control, and eventually Fatebreak Expeditions.

5. Prototype Worlds

World	Tier	Theme	Boss
Verdant Valley	Common	Tutorial forest	The Rootbound Guardian
Emberfall	Rare	Volcanic	Ignivar, the Molten King
Astral Reach	Mythic	Cosmic/space	The Star Eater

World definition: Name, Rarity, RollWeight, Environment, Music, Enemies, Boss, LootTable, Events, Modifiers, Duration, RecommendedPower, DiscoveryTable.

6. Expedition Structure

A world is a temporary expedition. Prototype duration: **12 minutes**. Explore, fight, collect loot/discoveries, confront the boss, then return to Crossroads.

World modifiers create replayability: Normal, Night, Eclipse, Corrupted, Nightmare, Invasion, Boss Rush, Time Trial, Lucky Hour. A roll can combine WORLD + CONDITION + MUTATION + EVENT.

7. Combat Framework

Combat must be accessible on Roblox/mobile while rewarding mastery.

Attack: left click/tap. **Ability:** Q or touch equivalent. **Dodge:** Space or touch equivalent.

V0.1 player: Health, Damage, Movement, Basic Attack, One Ability, Dodge. Enemies: Chase, Attack, Telegraph, Damage, Death, Loot. Boss: health bar, three attacks, phase transition, loot table.

8. Prototype Enemy & Boss Content

Verdant Valley: Moss Slime, Forest Wolf, Thorn Goblin, Elder Treant; boss: The Rootbound Guardian.

Emberfall: Cinderling, Magma Hound, Ashen Knight, Flame Wraith; boss: Ignivar, the Molten King.

Astral Reach: Starling, Void Wisp, Astral Knight, Gravity Beast; boss: The Star Eater.

9. Items, Builds & Loot

Build slots: **Weapon, Ability, Companion, Relic, Aura.**

ITEM schema: ID, Name, Rarity, Type, Damage, Ability, Passive, Element, Visual, WorldAffinity, DiscoveryText.

Prototype items: Rustwood Blade, Traveler's Bow, Stone Wand, Thornfang, Ember Dagger, Moonbow, Infernal Axe, Stormcaller, Dragonheart, Starforged.

Rare items should change gameplay. Example: Voidblade's Rift Slash opens a miniature black hole every fifth attack, damaging and pulling enemies together.

10. Discoveries & Discovery Book

An item is usable equipment; a discovery is something found. The Discovery Book is the long-term collection/archive layer.

Examples: Ancient Acorn (Common), Dragon's Tear (Legendary), The Eternal Star (Unknown). Some entries remain ??? to encourage community investigation.

11. Fate Progression

Fate is earned through rare discoveries, bosses, completed expeditions, global events, and new worlds.

12. Fatebreaks — Global Events

When a player obtains something extraordinary, the game reacts globally.

Example: **The Eternal Star — 1 / 100,000,000**. Global announcement: **FATEBREAK! [PlayerName] has discovered THE ETERNAL STAR. Reality has been altered.**

STARFALL lasts five minutes: stars appear, fragments spawn, rare enemies appear, star discoveries become available, the sky changes, and everyone receives a small Fate bonus.

Core principle: **one player's insane luck creates gameplay for everybody else.**

13. World Firsts & Hall of Fate

Extremely rare discoveries can create permanent first-discoverer records, unique titles, hub statues, leaderboard entries, cosmetic rewards, and museum exhibits.

14. Mutations & Content Multiplication

Use $\text{BASE} \times \text{ELEMENT} \times \text{RARITY} \times \text{MUTATION} \times \text{WORLD}$. Example: Dragon + Fire = Fire Dragon; Cosmic + Cursed Dragon = Abyssal Dragon.

This structured combinatorial system lets the project create a large discovery space without hand-authoring every object independently.

15. Idle / AFK Retention

Idle is not the main game. AFK/offline rolling exists to create return incentives. A welcome-back screen can report rolls, discoveries, rare items, and unknown finds.

16. Social Systems

Global announcements, World Firsts, discovery profiles, player museums, supplemental trading, and creator events.

Some discoveries should be soulbound. Rare equipment should be visually recognizable so players naturally ask how another player obtained it.

17. Daily Mystery & Recurring Content

Daily Mystery: one secret discovery, three clues, first-finder reward.

Weekly mutations reuse worlds while changing discovery tables and conditions. Monthly updates should add a meaningful mechanic, not merely more collectibles.

18. Data & Technical Architecture

Canonical principle: **Systems are reusable. Content is data.**

LUCKBOUND → Core (GameConfig, Constants, Types) → Systems (FateSystem, WorldSystem, CombatSystem, LootSystem, DiscoverySystem, InventorySystem, ProgressionSystem, EventSystem, SaveSystem) → Content (Worlds, Enemies, Bosses, Items, Discoveries, Events) → UI (FateRoll, Inventory, DiscoveryBook, Expedition, GlobalAnnouncements) → Assets (Hub, Worlds, Characters, Effects, Audio).

Use one canonical architecture. AI agents must not independently invent competing systems, RemoteEvents, naming conventions, or save structures.

19. AI-Assisted Development Model

Human team = Creative Director/Product Owner: decide, review, test, reject bad implementations, approve architecture, provide precise tasks. AI agents = implementation.

Use one architectural source-of-truth agent, specialized implementers, and a review/testing process against the canonical specification.

20. Prototype Scope — V0.1

One Crossroads hub; Fate Engine; first world roll; Verdant Valley; three core enemies; one boss; five initial weapons; five discoveries; basic combat; inventory; progression; 12-minute timer; basic AFK; one server/global event; one leaderboard.

Success criterion: a fresh player understands the premise quickly and willingly performs the loop again.

21. 72-Hour Prototype Roadmap

Tonight: Roblox experience, architecture, Crossroads blockout, Fate Engine, UI/data skeleton, first Fate roll.

Tomorrow: Roll → Verdant Valley → fight → loot → return; three enemies, boss, weapons, discoveries, combat, inventory, progression, timer.

Day 3: Emberfall, Astral Reach, Fate progression, modifiers, global announcements, first Fatebreak, Discovery Book, roll polish, audio, particles, hub polish.

Then stop. Give it to roughly 10–50 testers and observe whether players naturally roll → smile → enter → fight → discover → roll again.

22. Long-Term Expansion

Dozens of worlds, thousands of discoveries, mutations, seasonal worlds, global records, server histories, creator events, museums, mysteries, and structured procedural combinations.

Endgame direction: Ascension, permanent Fate-related power, corrupted worlds, and World Rifts.

23. Monetization Philosophy

Initially prioritize validation. Later monetize convenience/cosmetics: extra discovery slots, faster roll animation, AFK capacity, trails, museum decorations, custom effects, private servers, cosmetic titles, extra loadouts.

Free players must still be capable of extraordinary moments.

24. Performance & Platform Principles

Design for phone, tablet, console, and PC. Control geometry, effects, UI complexity, memory use, and network traffic. Make expensive systems tunable independently.

25. Design North Star

After getting a rare item, does the player immediately want to roll again? If yes, the core is working. If no, more worlds will not save it. Invest early effort in the Fate roll, anticipation, reveal, discovery feedback, combat feel, and the transition from rare acquisition to gameplay.

26. Canonical Terminology

Term	Meaning
The Crossroads	Permanent central hub
Fate Engine	Machine determining expedition destination
Fate	Primary meta-progression and reality-influence resource
Expedition	Temporary access to a rolled world
Discovery	Collectible thing the player finds
Discovery Book	Collection/archive system
Fatebreak	Extraordinary event triggered by exceptional discovery
Starfall	Example global event triggered by The Eternal Star
Ascension	Long-term prestige/endgame reset
World Rift	High-difficulty modifier-driven endgame challenge

Appendix A — Prototype Acceptance Checklist

- Player spawns in Crossroads and understands the Fate Engine.
- Player can roll a destination.
- World result visibly communicates destination and rarity.
- Player can enter and exit an expedition.
- Combat works with attack, ability, and dodge.
- Enemies telegraph attacks and drop loot.
- Boss has health bar, multiple attacks, and a reward table.
- Player receives a meaningful equipment upgrade.
- Discovery Book records discoveries.
- Fate increases through gameplay.
- AFK return produces a readable reward summary.
- At least one rare event affects the server.
- Core data persists safely.
- Experience remains usable on mobile.
- Fresh tester can reach the second roll without verbal instructions.
